Aathif Faizal

Student Email: raiyeesa87@gmail.com

Parent Email: raiyeesa87@gmail.com

Parent Contact: 773896210

Course: SE-Basic

Class Code: SE-TUE-PM

Status: active

Programming Fundamentals

SE-Basic · SE-TUE-PM

Weeks 1-6: Python programming core concepts

Week 1 — Introduction to Programming Concepts

Instructor Comment

Aathif's first went smoothly as it was about Python, and he had some experience in it. He had forgotten some concepts because he had not practice it recently, so he was given a recap of some concepts. He managed to complete all the tasks during class time.

Class Photos & Work

```
name = input("What is your name")
age = int(input("How old are you?"))
color = input("What is your favourite color")
diction = {"name": name, "age": age, "color": color}
print(diction["name"])
print(diction["age"])
print(diction["color"])
```

Week 2 — Conditional Statements & Logical Operators

Instructor Comment

Aathif already knew about conditions and logical operators, so he did not need a recap and managed to complete the questions without help.

Class Photos & Work

```
import time

sequence = "red, blue, green, yellow"

print("Try to memorize the sequence:")
print(" ".join(sequence))
time.sleep(3) # Sequence is displayed for 3 seconds
print("\033c", end="") # Clears the screen

player_input = input("Enter the sequence you remember, separated by spaces: ")
if player_input == sequence:
    print("Correct! You remembered the sequence.")
else:
    print("Incorrect. The correct sequence was:", " ".join(sequence))
```

Week 3 — Loops (For and While Loops)

Instructor Comment

Aathif learned about loops and their applications, practicing both for and while loops. He completed exercises to automate repetitive tasks and demonstrated improvement in logical thinking and problem-solving skills

Class Photos & Work

```
name = input("What is your name? ")
time = input("What time of day is it (morning/afternoon/evening)? ").lower()
def greet(name, time):
    if time == "morning":
        print(f"Good morning, {name}!")
    elif time == "afternoon":
        print(f"Good afternoon, {name}!")
    elif time == "evening":
        print(f"Good evening, {name}!")
    else:
        print(f"Hello, {name}!")

# TODO: Prompt the user to enter their name and preferred time of day

greet(name, time)

# TODO: Call the function and display a personalized greeting message
```

Week 4 — Continue Loops and Activities

Instructor Comment

Aathif learned how to define and use functions to organize code effectively. He practiced creating reusable blocks, which improved the clarity and modularity of his programs, showing a good understanding of structured programming concepts.

Week 5 — Memory Game (Mini Project)

Instructor Comment

No comment provided.

Week 6 — Functions in Python

Instructor Comment

During the in-class activity, he successfully managed to develop his own custom class and object, effectively showcasing the knowledge he gained throughout the session.

Class Photos & Work

```
class nine_eleven:
    company = "Porsche"
    def __init__(self, model, year, acceleration, purpose):
        self.model = model
        self.year = year
        self.acceleration = acceleration
        self.purpose = purpose
    def get_info(self):
        return f'{self.company} {self.model} ({self.year}) - Acceleration: {self.acceleration}s, Purpose: {self.purpose}'

trim1 = nine_eleven("Carrera S", 2020, 3.5, "Sports Car")
trim2 = nine_eleven("Turbo S", 2021, 2.7, "High performance Sports car")
trim3 = nine_eleven("GT3", 2022, 3.2, "Track-focused Sports car")

print(trim1.get_info())
```

Frontend

SE-Basic · SE-TUE-PM

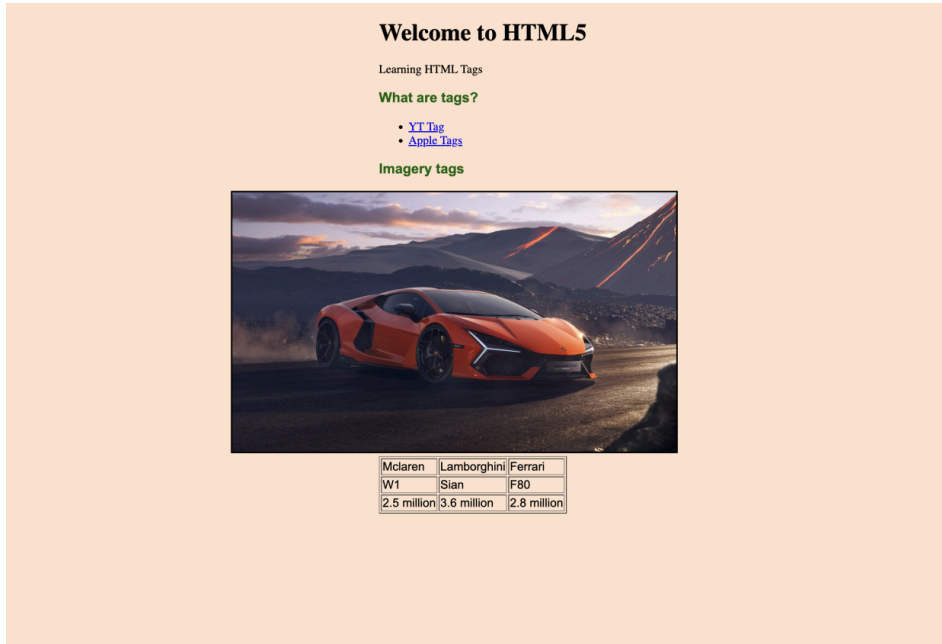

Weeks 7-13: HTML, CSS, JavaScript, UI/UX

Week 7 — Object-Oriented Programming (OOP)

Instructor Comment

Aatif has truly excelled in mastering the essential building blocks of the web, demonstrating a solid command of HTML structure and CSS styling. During the in-class activity, he successfully managed to develop his own informative webpage on automotive technology, effectively showcasing the knowledge he gained throughout the session by integrating complex elements like multimedia tags and data tables.

Week 8 — Introduction to HTML & CSS

Instructor Comment

Aathif has shown strong progress in understanding the core foundations of web development, especially through his use of HTML structure and JavaScript fundamentals. During the in-class activity, he successfully created a simple developer portfolio webpage and demonstrated his understanding of key programming concepts such as variables, strings, numbers, booleans, arrays, objects, and console outputs. His work shows that he is beginning to connect webpage content with JavaScript logic, which is an important step toward building more interactive and dynamic web applications. Great work, Aathif! 🌟

Week 9 — Intermediate HTML, CSS & JavaScript Introduction

Instructor Comment

No comment provided.

Week 10 — JavaScript Basics

Instructor Comment

No comment provided.

Week 11 — Advanced Web Development & UI/UX

Instructor Comment

No comment provided.

Week 12 — UI/UX Design

Instructor Comment

No comment provided.

Week 13 — Prototyping using Figma or Canva (Mini-project)

Instructor Comment

No comment provided.

Backend, API, DB

SE-Basic · SE-TUE-PM

Weeks 14-17: APIs, databases, SQL

Week 14 — Git & Version Control

Instructor Comment

No comment provided.

Week 15 — Introduction to API Development

Instructor Comment

No comment provided.

Week 16 — Data Structures and JSON in Python

Instructor Comment

No comment provided.

Week 17 — Introduction to Databases and SQL Basics

Instructor Comment

No comment provided.

Key Skills for Project Success

SE-Basic · SE-TUE-PM

Weeks 18-21: Testing, BA, PM, Soft Skills

Week 18 — Exploring SQL Queries and Database Management

Instructor Comment

No comment provided.

Week 19 — Software Testing

Instructor Comment

No comment provided.

Week 20 — Unit Testing in Python

Instructor Comment

No comment provided.

Week 21 — Business Analyst Role

Instructor Comment
